

Can/Bottle Unitizing Systems

Model SBC-932

Features

- High speed
- Reliability
- Quad-tensioning system
- Low Maintenance

Model SBC-932 Automatic Side Seal Strapping Machine

Standard Features

The SBC-932 Fully Automatic Strapping System is ideal for bulk loads of containers. There are 4 compression choices available to provide the best package for your application.

The SBC-932 features the fast and reliable VK-20 strapping head. The heavy duty heater knife has a cycle life in excess of 900,000 cycles, which insures strong consistent welds and low maintenance. Independent motors, which simplify maintenance and eliminate the need for multiple clutch assemblies drive the major functions of the VK-20 head.

Our Quad-Tensioning System (optional) applies consistent tight straps to your package every cycle. This is accomplished by integrating 4 features of the SBC-932 and matching them to your requirements.
